1

Setting the scene >> Technology >> Examples
Electromagnetics can immediately support Energy Transition

- **What are Energy Transition applications?**
 - Support EV change over– battery material - mining
 - GREEN energy – geothermal
 - Reducing carbon footprint via CO₂ sequestration & EOR+
- Others not shown here:
 - EOR → higher recovery factor → lower carbon footprint/barrel
 - Sub-basalt & subsalt imaging → lower environmental impact

Setting the scene >> Technology >> Examples
Lithium exploration Argentina

The Lithium triangle (Puna Region)
 (Argentina, Bolivia, Chile)

Hosts ~ 60% of the the world known (identified) resources of lithium reserves (USGS, 2020)
 Figure source: <https://www.sciencebase.gov/>

Lithium geophysical prospecting

- Ultra low resistivities
- Low acoustic impedances
- Density Variations → gravity
- Puna Region: Extreme field conditions

Magnetotellurics : **Powerful** lithium prospecting technique

16

Setting the scene >> Technology >> Examples
CCUS: CO2 influence on resistivity

- @ normal brine salinity → fluids are more resistive (6 -50 times)
- @ low salinity ($\leq 5,000$ ppm) → more conductive

21

Setting the scene >> Technology >> Examples CSEM Acquisition options

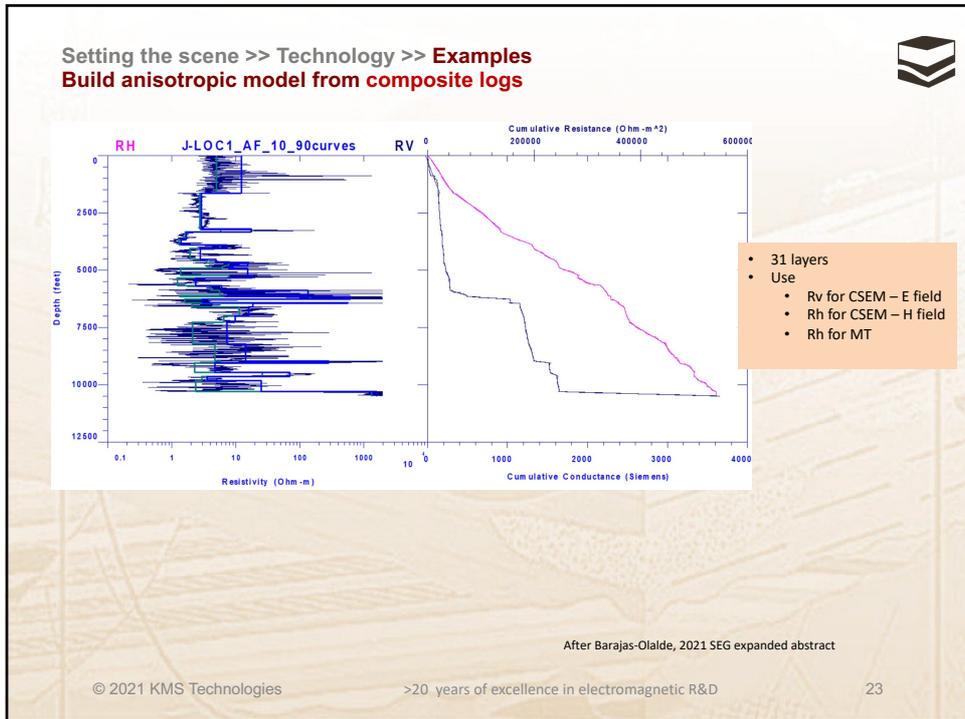

- 24 hours operation for CSEM (versus Standard: Night – MT & Day CSEM)
 - More routine less operational problems
 - Generator stays warm
 - Electrode pit remain stable
 - High production rate
 - Q/A via Cloud enabled receivers

27

Setting the scene >> Technology >> Examples
Summary

- CSEM is well suited for fluid imaging
- Depth 1 to km requires high power Tx
- High contrast (Lithium) no problem
- Geothermal: use in exploration & production
- CCUS: monitoring & with seismic for seal integrity
- **MUST: Calibrate – calibrate - calibrate**

© 2021 KMS Technologies >20 years of excellence in electromagnetic R&D 28

28

Setting the scene >> Technology >> **Examples**

FUTURE:

- Implement more ML/AI
- Acquire denser data: Seismic & EM
- Use EM for monitoring
- Integrate surface with borehole
- Integrate land & marine
