Subject: Appreciation to Prof. K M Strack and KMS
Technologies.

'An opportunity can add to a significant development', I meaningfully realized the saying because of Prof. Strack and KMS Technologies.

Prof. Strack, first touched my attentions through his popular CSEM book and was fortunate to meet him personally during 2009, in the EMTF meeting, Potsdam. I still remember the moments of happiness I received while interaction. Light, irony and very positive attitude were my impressions for him.

A PhD degree, where a researcher provides their own philosophical contribution, always keep important place in life. The spent duration in PhD is great because it facilitated my working in close association with some electromagnetic giants. The basic thinking mind which I use in my day to day research is tuned and shaped by these giants. I realized the prospects because of the sponsorship provided by KMS technologies.

From Bottom of the heart, I am thankful to KMS technologies and Prof. Kurt-Martin Strack, who played significant role in my personal development. I wish a lifelong continuing keenness and support.

Sincerely,

K M Bhatt
